Change happens every 30-40 years... we as humanity have gone backward with each year, de-evolving. Life, as portrayed in movies, is not realistic. Was Thanos evil or bad, or was he the good in all of this war on hate? There is no such thing as a happy, sad, whatever kind of ending, it is just an ending.

To make an enemy, make a friend... to make a friend, make an enemy

Friends will annoy you, sell you out, all for the want of a horseshoe nail.

Enemies won't bother you, sell you out, because secretly they are jealous of you, whereas friends are scared of you.

Think about if someone says to you, "I'll be watching you..." I would be like "Great I wish you would keep watching me, you'd be a great alibi and witness, an impeachable witness because you would have every intention to lie and be my enemy.

Don't let my paranoia go to waste, if I spend all my life thinking I've been watched, to find out no one was watching me, because our worst fears our own worst dreams/nightmares get the better of us.

At first, I felt intense pain then I started to hallucinate because I was in so much pain then I started to feel... Feel pleasure? Like feeling pain made me feel pleasure.

This work is a building block because it's hard to protect my work file lawsuits it's not worth it. I'd be considered the monster stopping works from expanding. And besides my work will eventually become public domain someday... Someday why not now? I'll forget these things so back them up or upload them to the internet archive.

I am crying my brains out.

Batman (at&t) vs the penguin (Linus torvalds)

Ha it's funny because a t and t owns Unix and Batman through DC comics and lives in the Batman building. Linus developed the Linux kernel and loves penguins and is a worthy adversary to a t and t. Linus should cosplay as the penguin and the CEO of Warner Bros should cosplay as Batman, using a creature of the night to scare when really bats are not scary looking.

paying for goods by bartering private personally identifiable information

me: At a grocery store
I buy some kind of energy drink, idk
the cashier says \$2.50 USD, please
aw crap I don't have 2.50, how about I show you my browsing history for
the past 2 days since I value My privacy at 1 dollar a day
the cashier says hmm how about I sneak a peek at your location history
like those old movies where they go WHERE WERE YOU ON THE NIGHT OF JULY
10th SOMETHING YEAR...
I say ok fine how about yesterday
cashier says ok
so in this world, even intangible data/information is worth something
like cryptocurrency..

If you were to put a price on your information or data how much could YOU
sell it for? Is it priceful or priceless...?

cheating death by josh

ok we'll upload your brain once you are at the point of death... too early or too late and you die

did it work?

do you remember dying

no I was underwater then here I am

you don't remember how you died?

no, I didn't die

yes, you did or more precisely your body died here look.

crying

what the fuck

we need a funeral

no, you are not dead your spirit lives on digitally

I don't want to be buried I don't want to be cremated I want to be at one with nature but my body rot in the forest or out at sea but I can be absorbed by animals and Waters in the air and the sky and everything in between I doesn't want to be stuck inside a little coffin or put in a wall or tomb with my name on it rather be free out there maybe free out in space that's never going to happen I want to think that when you die you become another person but have no former knowledge or memory of the old life you used to live because you certainly won't remember dying because your brain will die before you do because memory issues are what keeps you alive if you can remember but I think once your memory goes you're pretty much done for. I think technology and the invention of writing have allowed us to live in essence forever because of what we leave behind journals movies films sounds music remember a person place time thing in the galaxy in the universe and what could be outside the universe or outside the Galaxy or is there a wall that we can't pass through I also like to think that when you die you don't really die you just wake up or you just continue on death can be as instantaneous and yet death/life can happen in an instant and you might not feel anything you could travel to an alternate universe where you pick up right where you left off before your death and you never know the difference because it's kind of like the computer when the computer is on when it's in a sleep mode it remembers stuff but when you turn it off it's like you're

killing it for a specified time but then when you turn it back on it remembers where it left off.

The most important element in social studies is the U.S. government. I mean we have all these freedoms; write anything, say anything, do anything. We get a fair trial no matter what the odds are. I am trying to say there isn't any place in the world as good as the USA. In the world it is chaos. I mean wars, fights, and riots. I mean we are the translators of many languages like English. We are strong and I don't want it to crash.

Even though banks are centralized in terms of locations they are decentralized in terms of insurance from the FDIC where each Bank ensures the other Banks failure meaning that not all banks can go under at the same time. This is in contrast with Bitcoin whereas since Bitcoin is a decentralized in terms of location because it's all over the world it is centralized in the sense that it cannot be insured by the FDIC or insurance companies. That is a major flaw in cryptocurrency not being able to ensure because it is decentralized and yet it is centralized because every person who has crypto like Bitcoin is their own bank and therefore must ensure it themselves looking at the exchanges when it's like banks are operating on the exchange it's the same exact way when we exchange Bitcoin for Fiat as in US dollars we are acting as banks on The Exchange market or the Foreign Exchange market.

Bank A <--> Bank B <--> Bank C, with FDIC each bank insures the other banks.

God is the master puppeteer. deus ex machina, Deus ex the video game was a great game of the year because it was truthful and founded in facts, a warning of what was to come 20 years in the future. why else would the gov't and many rich people allow it to be published, because they were

happy that it was going to come true but the average joe brushed it off as a crazy timeline that couldn't happen ever, underestimation, great shit. The Sims which came out in 2000 as well also was allowed to be published because it showed that people either have limited free will or none at all... you are god playing a puppeteer or ventriloquist, controlling the very sims you created and money which came out of thin air. Simoleans a type of cryptocurrency if you will.

Dew Lork by Josh is licensed under Attribution 4.0 International. To view a copy of this license, visit <http://creativecommons.org/licenses/by/4.0/>

The great state of Dew Lork, named after Dewey of Lork, creator of the wormhole highway the DLS Spaceway, I realized that if I could live in DL, I could live anywhere and anytime...

I look back on my life and regret not getting into relationships, because i didn't like or love myself.

I blame myself for what happened everywhere, every time because it came from my mind.

to reprogram the brain, you have to essentially get close to death as possible like drowning, make you give up your mind to control, aka the falling dream when you hit the ground you shake. at your weakest will you give up your mind. open-source DNA and release it under the GNU GPL for modification and criticism. make DNA better, more secure. we have to get you to give up all fight, in order to save you and reprogram you. beautiful work DNA is, for if we can modify it we can make it better, secure fix flaws and gaps. those who have mental illnesses are not affected by the virus because they have no flaws, which makes control harder to accomplish. this is but the first.

DNA and mind control at the brink of death is marked with CC0 1.0

hi, all im recounting a dream I had or a nightmare depending on accuracy, so download this and use it any way you want for I am less than human, a retard, therefore I have not enough mental capacity to hold copyrights, like animals taking selfies themselves, I am an animal, destined to be a cockroach in my mind. plus I am married to the gov't receiving benefits therefore I cannot hold copyrights. If I cannot hold copyright then this work is public domain... you may have seen the other works I did recently under CC0 1.0 or with the text above because I'm not going to fight any copyright claims, too expensive, too time-consuming and life is short why live it even shorter. but I digress moving on, this dream I had of being shot in both shoulders seeing blood pour out of me on the ground, terrifying but it felt real and I didn't do anything. Dreams... why do we dream, are we unconscious or something much more sinister... are we being brainwashed? The whole free mentality is like a cotton swab going in one ear and out the other touch the brain pleasuring it and making it feel good scratching that itch!! I even had roller coaster rides with famous or weird people depending on your view... thank you all for keeping me sane and safe inside my mind, but TRUST your body and mind to not do

stupid shit when unconscious. good luck to you all and remember you all in the afterlife or after death depending on your views. I think I created this world I saw the signs but I ignored them until it was too late...

life after death I like to believe that you never really know when you're dead because you're dead before you're dead and you never really feel the pain because it's like shooting a camera that's streaming the stream cuts out before the camera does so it just goes black or white or I don't know what happens I have these premonitions in my dreams and they scare me I don't know what they mean all the coasters shotguns blood pouring into a storm drain. memories of falling muscle spasms fear of the public crowded places empty places wish there was a way to send a message to the next.. what if my life already happened and this is a recording and I'm going through because it's all based on recollection because it's not real-time it may have already happened it's like a tape on a video recording that it happened because cuz I don't remember being bored but likewise I won't remember being dead. money is no value I never had any rights. I wish I could live forever and see the future in the past I replaceable. I can't love anybody I can't have a kid. I'm real traumatized by the death of animals like pets like dogs and cats and anything else more so than humans I get along with people older and younger than me. the scary part was when I was dreaming it felt so real I cried maybe my dreams are trying to tell me something that I have no free will that everything was

determined for me because it's not happening in real-time it's being played back like a recording but I can't see the counter... why am I here at this place and at this time... blank place at the blank time for blank... i will die alone

Freedoms are marked with CC0 1.0 Universal. To view a copy of this license, visit <http://creativecommons.org/publicdomain/zero/1.0>

too much freedom equals too little freedom
gambol

in the grand scheme of things, nothing lasts forever and nothing's free eventually we will all be just some plaque in some crypt or on a wall in a tomb will just be somebody's memory or some scripture or something that will tell us that we lived we were alive at one point. enjoy your youth enjoy all the time you have in this world because I don't know what's going to happen it's amazing how I came to exist in this world at this moment when the internet started to take off it's funny how I was born a year after the world wide Web I was born when the Linux kernel was developed it's a funny fucked up world how I was born at this moment I was autistic and computers were starting to take over the world like I had a mission to expedite some grand scheme it is a coincidence or it is a planned timing. we all probably would like to live forever to see the fruits of our labors developed you know to keep having that funniness going on for the next 20 to 30 years but if we could live forever it would be like a deal with the devil as a matter of fact maybe it would be a deal with God or the opposite of the devil in terms of religion because I don't think hell is what everyone thinks how it is I think the church tries to paint a picture of hell tries to make people go to hell that way they can sell them heaven because if there's hell there must be heaven and it's like a pitch not in sales but souls pitch. don't be a slave to your job because it's not going to matter in the grand scheme of things just do your job just to survive and then go home and and build a legacy so that when you leave this world when you leave this universe when you leave everything behind they'll be some proof that you actually existed but then again if the universe collapses you know eventually will collapse might take hundreds or thousands or millions of years either the universe will collapse or the sun will go supernova and consume the Earth so in due time it won't matter as much especially if if we are all alone in this universal Galaxy if there are no foreign life on other planets no aliens in terms of human like I think the worst fear is not just loneliness it's also loneliness plus being alone because cuz you yourself have to be your own friend in this world in this galaxy it's hard to be your own friend if you because you have to live with yourself you got to deal with yourself everyday even when you're sleeping you're dreaming you're dealing with yourself. they say the wrong place at the wrong time but I think if something bad happens you are in the right place at the right time. are our lives rigged from the beginning and get-go because can we communicate on a brain level by sending out waves and pulses from our brains like whales send low-frequency communication in the ocean oceans and all around the world it could reach out to space if possible I guess that's why they call them space whales but if a transmission going to space forever when will it ever come back will it ever bounce off the

end of the universe which could be a sphere or a wall that we can't penetrate and we'll bounce back and come back to us as an echo some hundred years in the future but I'll never know I don't think I'll live for 100 plus years but because I'm dealing with technology and computers and files and stuff that can last as long as there's someone to maintain its kind of like the US Constitution it can last a lifetime plus which is quite scary because all the technology and all the books and all the writings will outlive us? I kind of wish we could just spectate once we die and not die but just go missing forever because it makes me sad pretty much every year right around this time say the end of February beginning of March maybe mid-march because of the snow the cold and your mind being stuck with your mind indoors with the snow outside in the cold bitter Frost it fucks you up and starts to haunt you.

I look over the bridge into the river, but then someone else jumps in and I save them. I was wondering what had happened until the person told me you were thinking the unthinkable of wishing you were never born. I nodded and said all these problems in the world were due to me being born, the virus, my family's troubles, the state of the world. I contemplated having corrupted the world due to my involvement...

Handgun Buyer's Guide

This guide is split into four sections: Picking a Handgun, Used Evaluation, FFL purchase, Private Party Purchase

First of all, as the first line of ATF Form 4473 states, you cannot purchase or transfer a firearm if you are prohibited from doing so by state or federal law. If you have a criminal history including but not limited to a felony conviction carrying possible a prison sentence of greater than one year, a misdemeanor conviction carrying a possible sentence of more than two years, unlawful use of a controlled substance (marijuana is still federally illegal), a dishonorable discharge, being legally adjudicated mentally unfit, or any history of domestic abuse you may not own or possess a firearm in any state. You are strongly advised to thoroughly read and understand ATF Form 4473 while filling it out, and answer truthfully under penalty of felony charges (5 years imprisonment; 18 USC § 1001).

Picking a Handgun

What's the best handgun to buy? It's not such a simple question because there is no "best," only what's best for you. You should have some use in mind; concealed carry, target shooting, cosplay, plinking, open carry, range toy, competition, hunting or general use.

- Mechanism

The two primary mechanisms you'll encounter are striker fired and hammer fired. Typically the latter is found in a DA/SA configuration with a decocker and/or safety. This means the first pull is a long, heavy double action for safety and each subsequent shot is a short, lighter pull for precision. Strikers in comparison have the same short lighter trigger pull for every shot. Typically speaking, a hammer fired pistol has a nicer single action pull than a striker which comes at the cost of

its initial heavy double action pull. There are exceptions; the Walther P99 is a striker pistol with a full DA/SA trigger and decocker, and there are many types of single action only (SAO) and double action only (DAO) hammer fired pistols such as 1911s and Kahrs, which have only one trigger pull instead of both DA and SA.

For the purposes of brevity we won't describe any further mechanisms beyond HK's LEM trigger, which is significant because it combines the aspects of both mechanisms. It is hammer fired with an emergency double-action mode, however the first pull is no different from all subsequent pulls. In this way the LEM mechanism acts like a striker, despite being hammer fired. There are several other types of mechanisms, variants and examples of these which the general consumer isn't missing out on by ignoring as there are much more important things to consider when buying a firstgun. If you are the oddball type however, this may be something to ask about.

- Size

Pick a frame size first. Full size handguns generally offer longer grips, higher capacity magazines and longer barrels, all of which are good qualities for plinking, competition, open carry, target shooting, hunting, home defense, duty, open carry and general use. Examples: Beretta 92FS, HK USP, 1911, CZ 75

Semi-compacts usually still have long enough grips that fingers aren't left without purchase, they may accommodate fewer rounds (~2-3 less) and have may shorter barrels than a full size. Those qualities are better suited to concealed carry, home defense, open carry, duty, plinking and general use. Examples: Walther P99, CZ P-01, Commander 1911, Glock 45

Compacts typically have shorter grips with slightly lower magazine capacity than semi-compacts (~2-3 less) and typically have even shorter barrels as well, good qualities for easier concealed carry, home defense and general use. Examples: HK USP Compact, Glock 19, Taurus G2C, Beretta APX Centurion

Sub-compacts usually have very short two-finger grips for easier concealment, even fewer rounds (~1-2 less) and even shorter barrels than compacts resulting in lighter weight. Those are good qualities for even easier concealment. Note that what one manufacturer calls a "compact" might be the size of a "sub-compact" from another manufacturer.

Examples: HK VP9SK, Walther PPQsc, Glock 26, Smith & Wesson Shield Pocket guns are very small, thin, nearly always single stack, with very short barrels; good qualities for deep concealment or easy concealment under light clothing. Examples: Sig P238, Ruger LCP, Kel-Tec PF-9, Kahr P380

- Caliber

This is tough to get into without getting into specifics or stepping on anyone's toes so the writer won't even try: 9mm is the most practical and effective handgun cartridge for nearly all purposes. Using top mainstream defensive ammunition (Winchester Ranger-T, PDX1, Speer Gold Dot, Remington Golden Saber, Hornady Critical Defense, Federal HST and Hydra-Shok), 9mm has excellent penetration and reliable expansion while offering greater capacity than larger calibers. 9mm offers a wide range

of projectile weights, types and loads for a variety of purposes from plinking to hunting.

To be clear, there is nothing particularly wrong with other common handgun calibers like .40 S&W, .45 ACP, .357 Sig, 10mm or even .380. However for most purposes the capacity of 9mm outweighs the benefits of these calibers, as "knock-down power" and "terminal ballistics" are not significantly different among common handgun calibers. If you decide that a particular firearm fits your needs, wants or budget and is available in any of these calibers, there's no reason you shouldn't buy it. However the move of FBI and police from 10mm, .45, .40S&W and .357 Sig back to 9mm is happening for good reason (this is why there are so many .40S&W surplus handguns on the market as of late 2017).

- Ergonomics

Ergonomics are somewhat difficult to nail down, because when you pick up a gun you "like," you're going to WANT to like it and you may overlook its flaws or uncomfortable features. Ideally a handgun should be comfortable to hold, have controls easily reached, point naturally and have usable sights. You won't be able to determine this without using your hands and eyes. Whether you make a purchase there or not, go to a gun store and handle some guns. Use popular, readily available handguns as a springboard to decide what you do and don't like. Be critical. Does the grip angle feel natural to you? Does it hurt your hand someplace? Do all your fingers have purchase? Can you reach the controls? Can you easily rack the slide? Does your resting thumb prevent the slide stop from working? Can you reach the magazine release without altering your grip? Do you like the sights? Is the trigger uncomfortably far forward when at rest? Does the trigger break cleanly or smoothly?

There's a ton of subjectivity here, so you're going to have to handle a lot, shoot a lot, and develop preferences of your own to inform future purchases.

If you're able to choose a frame size, caliber and ergonomics, you should have a relatively small list of handguns. If you aren't able to choose, then take other people's advice: popular handguns like the Smith & Wesson M&P, Glock 19, FN FNX, Beretta 92, CZ75, Walther PPQ and HK VP9 are popular for good reason.

Used Evaluation

If you don't know what you're looking for, determining whether a gun is worth what the buyer is asking can be tough, especially over the internet. Protip: "only 200 rounds" is code for 1,000+ rounds.

Simply put, you won't be an overnight expert when purchasing your first used handgun. But some simple things to look for are noticeably weak recoil or hammer springs, chipped or broken extractors, excessive slide rail wear, surface finish wear (especially holster wear on the corners, rust, pitting, scratches and wood grip cracks), bore pitting or shallow,

dull rifling, dings from drops (especially on the sights and grip panels) and "custom work" (which usually means home-gunsmith botched internals-- be VERY wary of anything "custom").

The simplest way to ballpark an accurate, fair value is simply to look the gun up in as many markets as you can. Call stores, visit Gunbroker, Armslist, Gun Auction, Guns America, Backpage, Craigslist. Check for-sale forums on ar15.com, m4carbine.net, glocktalk.com, hkpro.com, northwestfirearms.com, ingunowners.com, pafoa.com, calguns.com, anywhere you might find used guns for sale.

FFL (Federal Firearms License) Purchase

Buying from a Store

Most handguns you buy will come through an FFL, whether you are buying online or in a store. The process of buying a gun from a gun store is simple before state laws are satisfied:

- Be 21 or older
- Pick a gun
- Truthfully complete ATF Form 4473
- Provide ID (accepted types vary by state law but a driver's license is always accepted)
- Wait for your background check (typically it takes 5-15 minutes but may be delayed as long as three days)
- Pay for the gun during or after the background check is completed

Buying Online

If you are buying from an online reseller or a private party in another state the only differences are that you will pay first and you will have to ask your local FFL to send their FFL info to the out-of-state source. The firearm must be shipped to your local FFL for transfer, and once the firearm arrives locally, the process is otherwise the same:

- Be 21 or older
- Pick and pay for the gun online
- Contact your local FFL (gun dealer) and request that they send their FFL information to the contact address provided by the gun's seller
- The gun will be shipped to your local FFL
- Truthfully complete ATF Form 4473 once the gun arrives locally
- Provide ID (accepted types vary by state law but a driver's license is always accepted)
- Wait for your background check (typically it takes 5-15 minutes but may be delayed as long as three days)

Many states require that all transfers, including private ones, go through an FFL. See the following page for an unofficial list of state laws:

<http://consumer.findlaw.com/consumer-transactions/private-gun-sale-laws-by-state.html>

Shipping, transfers and background checks cost money, so expect to pay a little extra for those things where applicable. But don't let the store

rope you in to pointless extra costs like ammo, cleaning gear, holsters, bags, cases or other accessories! Those things can all be purchased elsewhere later, if needed, at lower prices.

Private Party Purchase

There are no rules apart from the same federal firearm prohibitions and further state prohibitions, so it's up to you to be safe and prudent. Unless required by state law, you are not required to perform or submit to a background check, provide a receipt or follow any guidelines. Use your judgment; does it sound too good to be true? Do they want to meet someplace strange, dark or empty? Do they refuse your request for location, ID, written receipt or anything else? Do they ask suspicious questions? If anything feels the least bit fishy, cancel the transaction and wait for another buyer or seller.

Suggestions for a safe, painless private party transaction:

- Make certain both parties clearly agree to the price beforehand
- Meet someplace public, well lit and busy, like the parking lot corner of a police station, supermarket or strip mall
- If you wish, you may request to see ID or request the other party sign a written receipt
- Bring a friend but don't be intimidating
- Follow firearm safety rules and be polite

The writer of this pasteshit has done did several dozen private party transfers in parking lots and never once been taken advantage of, threatened, intimidated, cheated or robbed. Gun owners tend to be upstanding, honorable citizens so treat them that way, but be prepared.

Holster Buyers Guide

Buying a holster is a subjective, personal thing. What works for somebody else might not work for you. First and foremost understand that there may be a little or a lot of trial and error before you find the perfect holster. If the first one you try doesn't work out, don't give up on carrying. Try something different, whether that means just a different style, or a different location, or a differently sized handgun. Secondly understand that some level of discomfort is associated with carry. It may be almost none or it may be a lot depending on what, where and how you carry, and what you do throughout the day. It's not likely you'll forget you're wearing a handgun so don't set your expectation of comfort too high. But also don't tolerate too much discomfort, there are alternative options, from IWB appendix Deagle to pocketing .32. This is not meant to be a comprehensive or absolute guide, just enough to get you looking in the right direction.

- Holster Applications

Types of holsters typically aren't limited to one type of carry. For instance you could use an AIWB holster at 3:00, or trigger guard cover for IWB or pocket carry. But generally a holster marketed as something

has features tailored to that role. So what role do you want to employ? What you typically wear plays a large role in where you are able to carry. Tight clothes, tucked in shirts and lack of overgarments limit your options. You could dress to suit carry, or you could carry to suit what you wear.

IWB - Inside the Waistband. Most common and accessible carry, can be comfortable standing or sitting, generally requires loose or untucked clothing. Bumping objects can be a worry, likelihood of printing is medium-low. Typical location 2:00-4:00 on the belt.

AIWB - Appendix, Inside the Waistband. Growing popularity for comfort while standing, low worry of bumping objects or printing, but less comfortable when sitting. Typical location 10:00-2:00.

OWB - Outside the Waistband. Virtually no limitations if concealment is not a concern, if it is then an untucked long shirt or jacket can conceal nicely. Bumping objects may be a worry, likelihood of printing is high. Typical location 2:00-4:00.

Pocket - Probably going to be limited by the size of your pocket opening. Very easy, little preparation, comfortable. A rigid holster is preferred for safety but a soft padded holster helps break up the shape of the gun. Do not carry objects in pocket with gun. Likelihood of printing is medium, but likely to be ignored as a wallet or phone.

Purse - Largely similar to pocket carry, but with less size restriction. A rigid holster is a good idea if purse carry is the only option, but carrying in a purse is a bad idea due to

Shoulder - Comfortable load distribution with a good holster, but requires an overgarment to cover the harness and holster. Low likelihood of printing or bumping objects. Can be an option for formal dress where a tucked waistband would not permit IWB or AIWB and thin pants would display pocket carry.

Chest - Guide style carry is good if you are innawoods, especially if you have a rucksack with a waist strap that would not permit IWB, OWB or AIWB.

Ankle - If the gun is small and light enough this can be a short-term option but other locations are strongly preferred.

Lumbar - Difficult to reach under clothing, potential back injury if you fall on it. Strongly discouraged.

- Holster Materials

Kydex/boltaron are generally going to be best because of the price, performance, rigidity and diversity you will get out of them. They are rigid so they do not collapse on your trigger guard upon reholstering. They perform better because they do not retain moisture. They have solid retention even without an active retention mechanism like a thumb break or Safariland ALS/SLS. There are diverse options because they are easy and inexpensive to make.

Leather, be prepared to spend \$80+ for quality leather, and more for a shoulder or chest rig. Horsehide is preferred for its stiffness over bull.

Neoprene/Nylon holsters are fine for pocket carry but are a bad idea for IWB/OWB use. The materials are too soft/cheap and may collapse on your gun, retention is poor, active retention is insecure.

Cheap leather holsters are also fine for pocket carry but are a bad idea for IWB/OWB use. The chief drawback to a leather holster is that it's soft enough to deform into the trigger guard but still rigid enough to catch the trigger when holstering and fire the pistol.

- Reputable Holster Brands

IWB - T-rex arms, Tier one, G-Code, Tenicor, Kerber Arms, Bravo Concealment, Raven Concealment, Vedder, Garrett, Phlster, JM Custom, ANR Designs, Milt Sparks

OWB - Safariland (ALS/SLS), Bravo Concealment, Raven Concealment, Kramer Leather, Gunfighter Inc Kenai, Vedder, Garrett, El Paso Saddlery, Milt Sparks

- Belts

A good, rigid gun belt is essential to effective and comfortable carry. Hanks, Beltman, El Paso Saddlery or Amish for leather. Blue Alpha Gear for cobra buckle/nylon style. Safariland makes a good faux leather concealment belt.

Glossary of handgun and firearm terms

A trigger pull dissected:

1: Take up - Also known as slack or pre-travel. The first, light portion of a single action trigger pull prior to staging wherein the trigger linkage is brought into contact with the sear, at which point pull weight increases.

2: Staging - Also known as the wall. The point of a trigger pull subsequent to take up and just prior to the break wherein the trigger linkage is immobile and in contact with the sear, causing an increase in pull weight. Any further pull will draw the sear off the hammer or striker, allowing a shot to be fired.

3: Break - The act of slipping the sear slipping off the hammer or striker--essentially, the shot being initiated.

4: Overtravel - The final portion of a trigger pull wherein the trigger continues to travel rearward after the break.

5: Reset - The portion of a trigger cycle subsequent to the shot being fired wherein the trigger is allowed to come forward under spring tension, allowing the sear to re-engage on the hammer or striker in preparation to break for the next shot.

Additional terms:

Battery - The position of the barrel and slide in relation to one another. In battery meaning that the barrel is fully locked into the slide and ready to fire safely, out of battery meaning that the barrel is not fully locked into the slide and is unsafe to fire.

Creep - Also know as slop. Describing the quality of a break wherein some movement is detected with the finger prior to the break.

Crisp - Describing the quality of a break wherein no movement is detected with the finger prior to the break.

Cycle - The complete procession of firing events by which the hammer or striker are cocked, the trigger is pulled, the slide is reciprocated and the trigger is reset. It is usually done without live ammunition in order to examine trigger qualities or perform safety function checks.

Decocker - A spring powered rotating or linear active control in a firearm which allows the hammer or striker to discharge safely without striking the primer. It is initiated manually.

Disconnecter - A pivoting or linear component in a trigger group designed to prevent multiple firing by holding the hammer or striker from releasing until it can be re-engaged by the sear independent of trigger position.

Double Action (DA) - A hammer mechanism wherein one pull of the trigger both cocks and fires the firearm. Double action pulls tend to be long and heavy.

Double/Single Action - A hammer mechanism wherein the first heavy pull of the trigger both cocks and fires the firearm and all subsequent pulls are light and only fire the firearm without further cocking.

Drop safety - Any number of mechanisms that passively prevent the firing of a handgun when dropped. It is usually disengaged during trigger take up.

Extractor - A typically articulated claw in the slide whose job it is to grab onto the rim of a cartridge case and extract it from the barrel's chamber after firing.

Firing pin - An unpowered linear component in a firearm which is struck by a hammer, delivering force into the primer to discharge a shot.

Firing pin block - A spring powered linear passive mechanism in a firearm which prevents the firing pin or striker from striking a primer unintentionally. It is usually disengaged during trigger take up.

Fully pre-charged - Similar to single action. A striker mechanism wherein the striker is held completely cocked. The final pull only fires the firearm without further cocking.

Grip safety - A spring powered pivoting passive mechanism in a firearm which prevents the trigger from moving the sear off the hammer or striker unintentionally. It is disengaged by gripping a handgun.

Hammer - A spring powered rotating component in a trigger group which, once released, strikes the firing pin, discharging a shot.

Lock time - The time it takes after a break for the hammer or striker to initiate a primer and discharge a shot, usually measured in milliseconds.

Overtravel stop - A screw or bumper placed to prevent the trigger from continuing rearward after the break.

Partially pre-charged - Similar to double action. A striker mechanism wherein the striker is held mostly cocked. The final portion of a trigger pull completes cocking and fires the firearm.

Power stroke - To manually and forcefully rack the slide without finesse in order to clear a malfunction utilizing a minimal amount of attention.

Pull weight - The weight required to fully pull the trigger rearwards until it breaks.

Rack - To manually reciprocate the slide in order to load a new round, clear a malfunction or remove an unfired round.

Reset length - The distance that the trigger must come forward to allow the sear to reset for the next shot.

Safety - An unpowered rotating active control in a firearm which prevents the trigger from moving the sear off the hammer or striker. It is engaged and disengaged manually.

Sear - A spring powered pivoting component in a trigger group which holds the hammer or striker in a cocked position.

Single Action (SA) - A hammer mechanism wherein one pull of the trigger only fires the firearm without cocking it. Single action pulls tend to be short and light.

Single-stage - A rifle-specific term to describe one stage of trigger pull; break only with no cocking done by the trigger. Hammer-fired single-stage rifle triggers are short but tend to have creep and overtravel, striker-fired single-stage rifle triggers tend to be short, light and have little to no creep or overtravel.

Striker - A spring powered linear component in a trigger group which, once released, directly strikes the primer and initiates a shot.

Trigger linkage - Also known as a trigger bar. An unpowered linear component in a trigger group which connects the trigger to the sear.

Trigger safety - A spring powered pivoting passive mechanism in a firearm which prevents the trigger from being pulled unintentionally. It is disengaged by placing a finger on the face of the trigger.

Two-stage - A rifle-specific term similar to a pistol's single-action to describe two stages of trigger pull; take-up and break only with no cocking done by the trigger. Two-stage rifle triggers are longer but tend not to have any creep and little overtravel.

headcanon for agents:

are gov't agencies really dumb for sending agents out with unloaded/unarmed/no ammo weapons? we are the aliens, playing roulette with no bullets but they don't know that.

Home. There's no place like it. Yea, there's no place like a fighting arena inside someone's home, where pots, pans, beer bottles, and expensive china are thrown and broken pieces of shrapnel fly all over the place. My house is awfully repulsive and has not been taken care of by anyone including me. When my family argues and/or fights occur the house becomes an arena where the walls are punched in by fists, decorations torn off the walls along with the drywall screws that are left behind behind stripped holes. Doors are beaten and bashed in.

My house did not look like it had been ravaged by my family. It had been clean, friendly, and non-destructive. Four to five years ago, my mother had come down with an illness causing her to hack and have seizures at random times. She left tissues and her socks everywhere, leaving both a mess and stress. My father, who is sensitive to annoyance could not stand the annoying irritating coughs and gooey tissues my mother left all over the place. He loses his anger really easily and destroys whatever he can get his hands on. A bowl, which he had so craftily made with his oil-stained callused hands, became junk and was unable to sell after hitting it against the wall in his den, splitting the bowl and chipping the dark pink satin paint. He took the two halves of the bowl and turned it into a shelf, which was an apology gift he gave to my mother on mother's day for fighting with her so much.

Out of all the rooms in the house, mine is the weirdest one of all. Originally my room was much smaller and I had only one door to go in and out. Three to four years ago, my family bashed the middle wall in, not because they were fighting, it was because I needed a larger space to live in. My room is like a room from "The Twilight Zone". Half of my room is painted white on drywall, and the other is stained dark oak wood sheets, with some wood sheets across the ceiling. I have two types of flooring. My parents never really bothered ripping out all of the tiles and put down fresh, all the same tiling which would cover the floor. They just left it as is, and just gave me a big, gray carpet to put over the crack in the middle. My room is not square. My house is one of those homes where the walls used tended to create a second floor, and in my room, it is a damn challenge to stand up, because the walls are slanted, and it is a pain when I smack my head for something as simple to get my clothes out of the drawers. They, ironically, can't be moved because the whole closet is embedded in the wall right next to the slanted walls. My room is what I would call fucked up!

My house is timeworn; it looks terrible as my family continues to argue, disagree, vent, and fight which always occurs. The stairs once had carpet attached to it, but now that the carpet is gone, it looks awfully putrid.

The color of dark pink painted on the steps and a coat of ghost-white on the railing does not mix especially with the dirt and scrape marks from high heels and boots treading up and down, which I can say I do daily. I used to love my house, love to sit and relax, but as far as I know the only time I can peacefully relax and sleep, and the house is not being destroyed is where there is absolutely nobody but the animals inside. My sister's room is the cleanest, tidiest inviting room in the whole house. The bed is always made whenever I see it. The room once was my parents', but they moved downstairs, where my father and his brothers built another room that was part of the living room. My sister's room is my dream room I am going to have once she moves out. The walls are a solid gray color and fully drywalled unlike my room, where I have to duck to avoid scraping my head on the nails that always seem to come out from the wood sheets. Her floor is also fully tiled and is missing any cracks where one could trip over if walking barefoot and a toenail catches a crack. She has a bathroom which is quite small, containing only a toilet and a sink. I have to sidestep to move in and out since I am lofty and there is no place to turn. Her bed is right in-between her thirty-inch plasma television and her extremely slow computer which so often crashes and wants to toss out the window. I am also jealous of her because her walk-in closet is three times the size of my puny and quite ridiculous handmade closet. Her closet used to be able to be accessible from outside our rooms but became inaccessible when my father built my closet. I envy her bedroom because it is moderately perfect.

The kitchen is where most of the damage occurs in the house. It is where my family eats dinner and gathers around for family meetings. Sometimes plates get smashed on the floor, glass bottles get thrown at and break on someone's face, leaving blood across walls, pans get bent in due to someone bashing themselves over the head a couple of times. My family sometimes breaks appliances when they are frustrated or are angry with the appliance in question. For example, a quesadilla maker I gave to my mother for Christmas, last year was separated into two pieces, because my father threw it at my mother, who was fortunate to have closed the bathroom door in time. The kitchen has recently been painted and still looks unpleasant to the eye.

My parents' room is by far the messiest and oddly enough comfortable room to sleep in. My mother, a lunatic, disorganized, drama queen, and high maintenance woman cannot discipline herself enough to pick up her laundry which is sometimes strung across her dresser. Her makeup desk is also littered with glitter, lipstick, tweezers, eyelashes, and hair products that are not in an organized fashion, some of which have prematurely discharged all over the desk, making it stink like a supermodel's body. I despise what she does to her and my father's room. I cannot stand how she does not organize her belongings. The house almost went up in flames, after her carelessness caused a metal necklace to fall in-between a plug and an outlet causing a short circuit on a power strip next to the dresser. Thankfully, the circuit breaker prevented the house's demise. My father, on the other hand, takes care of his possessions'. There is an iPod next to my parents' television in their room, which has never been broken due to an injudicious dispute. The room's floor used to have carpet but since my mother is allergic to everything in the house, we had to take it out. Since then, I miss not having carpet to lie on, just

itchy rugs which I trip on and fall over like a stiff brick. My house is much colder than it used to be.

My father's den is cluttered with mile-high shoes my mother does not wear but keeps anyway. The den has an array of computers, his personal machine, one server, and one laptop for secure activities such as online banking and shopping. The huge deck is always cluttered with notes, paper, check stubs, stamps, and samples of wood he collects from hiking out in the woods. On my birthday, he was trying so hard to "keep the peace" since I was the birthday boy, but as soon as my relatives left, it was an all-out war. With fists of fury and barking mad, he angrily punched a hole in the bathroom door, because my mother was complaining about how the party went and how all of our relatives treated her. She always has to find something to complain about, all the time.

Fortunately, the door was going to be replaced anyway.

My house has thankfully lived throughout my childhood. It is a place where my family and I vent feelings of frustration, anxiety, and take out our anger. The house looked so much better ten years ago, but due to my family and me, our destructiveness has turned the house into a free for. I do not fight as much as I did back then. I try to keep calm, cool, and collective and run upstairs as fast as I can, into my bedroom, close the door, blockade it with my chair, and sleep on my bed until either dinner's ready or everyone has left the house. Living in my house really did change me from the inside out. I learned that there is no reason to fight; it is just going to end up breaking an object or punching a door in with your knuckles.

I remember who used to live in my house. Their name was DeKlotz. I do not know how to spell their name, it is just how it sounds phonetically. I saw pictures of what the house used to look like, and I was surprised that the DeKlotz was not as violent as we are today. They actually took care of themselves, others, and their possessions. But not my family. If you come over to my house, be prepared to fight because my house is a place where there are profane language and destructive behavior. In other words, it is a fight club and if it is the first visit, be ready on the defense and watch out for the stair railing at all costs.
